...areas are etched or engraved be-
...groove and steel die engraving;
...areas are on fine mesh screens
...and the non-image areas are a
...Examples are screen printing and
...stencil duplicator. Images by each
...printing process have dis-
...tinguishing features illustrated below.

Planographic - Offset Lithography
This is the major plate printing process. It uses thin metal plates with the image and non-image areas on the same plane. There are two basic differences between offset lithography and other processes: (1) it is based on the fact that oil and water do not mix, and (2) it uses the offset principle in which ink is offset from the plate to a rubber blanket on an intermediate cylinder, and from the blanket to the paper on an impression cylinder.
On a lithographic printing plate, the printing areas are oil or ink-receptive and water-repellent, and the non-printing areas are water receptive and ink-repellent. When the plate mounted on the plate cylinder of the offset press is rotated, it comes into contact with rollers wet by a water or dampening solution and rollers wet by ink. The dampening solution wets the non-printing areas of the plate and prevents the ink from wetting these areas. The ink wets the image areas which are transferred to the blanket cylinder. The inked image is transferred to the paper as the
